| Description Attribute 'unit' has an initial value, which is constant. Current model shows it the same way as the variable part, i.e., 'value' attribute (specific to an instance). | |
| Proposed Solution Make string attributes with initial value (e.g., 'units') static (i.e., const class variables), since the value is constant and the same for every instance. 20070502/LOO This comment was made on an intermediate version and the current model is correct. Close issue | |
