Description This is one of rare classes (out of Domain package), that does not inherit from Core.Naming. Should it or not? Season has a 'name' attribute which is not a String, so if it inherits from Naming, there will be clash in 'name' attribute.	
Proposed Solution 20070502/LOO Season.name has been changed to an enumeration. Close issue.	
Decision Refer to WG13_CIM_Issues_Report_20070508.doc WG13/2007-05-08 2009-03-10: KLH - Closed. No change.
