Requestor:			

Description

normal status on PSR
ShuntCompensator - normalStatus on PSR maps to normal in service (not specific to planning), ActivityRecord maps to actual status.

Proposed Solution

Nothing here is specific to planning and the existing. PSRStatus is using only a string as the status which seems unclear how to use. Planning added normalStatus:String to PSR.   Used for operations and for planning.

Decision

New attribute on Equipment.   "normalIlyInService" - boolean 4/16/2008
Description needs be made.   In the absense of breaker models this is used to disconnect the device from the network.
