Suggest to allow GetServerDirectory(FILE) responses in any of the forms:

"/" (indicate the root of the 61850 file system)

"/xxx" or "/xxx/yyy" (indicates a folder within the file system)

"/filename.ext" or "/xxx/filename.ext" (indicates a file within the filesystem which can be opened if authorized)

(Note: only names returned without a terminating "/" should be sent in FileOpen or GetFileAttributes request during a conformance test because otherwise the results are undefined)
