Description This new attribute will inform the Energy supplier when the (next) reading is done. Could be a date, or a string with a format "MMDD". Example 0704 informing that regular readings are done yearly July 4th. Typically used for yearly read market evaluation points. Description of the new attribute can be "The indication of when the next meter reading is scheduled." The datatype is String (to allow different use cases; 2022, July, 0704). Implementation would specify the rules as to the format of the expected next reading schedule.
