Description	
Associate the class BusinessSector with the MarketDocument class (many-many-association).	
When documents are exchanged these can be "routed" to different systems, or parts of systems, depending on the specified business sector. E.g. all customers and their data may be stored in one system or different systems depending on type of utility. For example a document with prices may be sent to both a system for gas and for electricity.	
Proposed Solution	
See figure.
