#### Description

Add scheduledMeterReadingDate attribute (String) in the MarketEvaluationPoint class [0..1]

This will inform the Energy supplier when the (next) reading is done. Could be a date, or eg. with a format "MMDD". Example 0704 informing that regular readings are done yearly July 4th. Typically used for yearly read market evaluation points.

#### Proposed Solution

Was first suggested to be added to MarketEvaluationPoint. But was later agreed (spring 2020) to be added as a new attribute in UsagePoint:

nextReadingDate

Suggested definition: The indication of when the next meter reading is scheduled.

Still to check: Is a format "MMDD" possible to use with a DateTime attribute? Or should the attribute be of datatype "String"? Note also next issue.

#### Decision

Discussed in WG14 May 26th Mtg: Agreed on the addition of a new attribute in UsagePoint; nextReadingDate.

3/10/2022: Request a change to the attribute name of nextReadingSchedule; with a String datatype to allow the use of the next year or month such as "2022", "July" or "0704". What forms should be allowed - MMDD, YEAR, MONTH, MON, etc? Implementation would specify the rules for acceptable values.

4/21/2022: Added new Redmine issue; #5345

#### History

##### #1 - 07/19/2022 05:28 PM - Becky Iverson

- Status changed from New to Closed

- Proposed Solution updated

- Clause changed from UsagePoint

(originally MarketEvaluationPoint) to UsagePoint(originally MarketEvaluationPoint)

- Decision updated
