Description At ENTSO-E there are multiple processes that are run at different timeframes. For example Capacity Calculation Process can be run for Long-Term, D-2, Day-Ahead, Intraday and Real-Time (15 min resolution). However it is not possible to define the timeframe of a process in the current version. There are also some cases in which a timeframe could be defined for certain businessTypes. For example, we could have Day-Ahead or Intraday market prices. Currently in both ESMP process and businessType codelist there is a mix of timeframes, business and processes. In order to have a better attribute granularity, ENTSO-E is interested in the introduction of the EnergyMarket class in ESMP.	
Proposed Solution Move EnergyMarket from package MarketPlan to MarketCommon. Add new associations between Process and EnergyMarket and between TimeSeries and EnergyMarket.	
Release Notes EnergyMarket moved to MarketCommon package Association added; EnergyMarket -> Process Association added; EnergyMarket -> TimeSeries EnergyMarket added attribute timeframe
