### Description

What's the definition for 'Supporting Substitution Service' while filling the PICS and PIXIT?

For example, if the SUT could only send write request for DAs 'subVal' and 'subEna'; but could not send write request for subQ (but after writing 'subEna' to 'True', SUT could handle the value of q with substituted bit set). Can we say the SUT supports substitution service?

### History

**#1 - 04/01/2025 08:49 AM - IEC 61850 TPWG**

*- Due date set to 04/15/2025*

*- Status changed from New to Rejected*

*- Closed Reason No Action Taken added*

*- Closed Reason deleted (--Not Set---)*

From the information given, the SUT does not appear to be compliant with regards to substitution.
